

The Gauge One Model Railway Association

Gauge 1 model railways run on tracks where the rails are 45mm or 1¾ inches apart. For standard gauge, this corresponds to a scale of 1:32 or around 10mm to the foot.

We run models powered by on-board batteries, by track-supplied current and by live steam with boilers fired by alcohol, gas or coal. Even clockwork engines still make occasional appearances.

The size of Gauge 1 models allows for exquisite levels of detail in fine-scale models, and the availability of robust, simplified models also makes it an ideal scale for youngsters.

You can read about the breadth of activity within G1MRA by downloading copies of our welcome brochure and our quarterly magazine from
